

KPI Dashboards

The New Financial Reporting Model

26th July 2018

Introduction

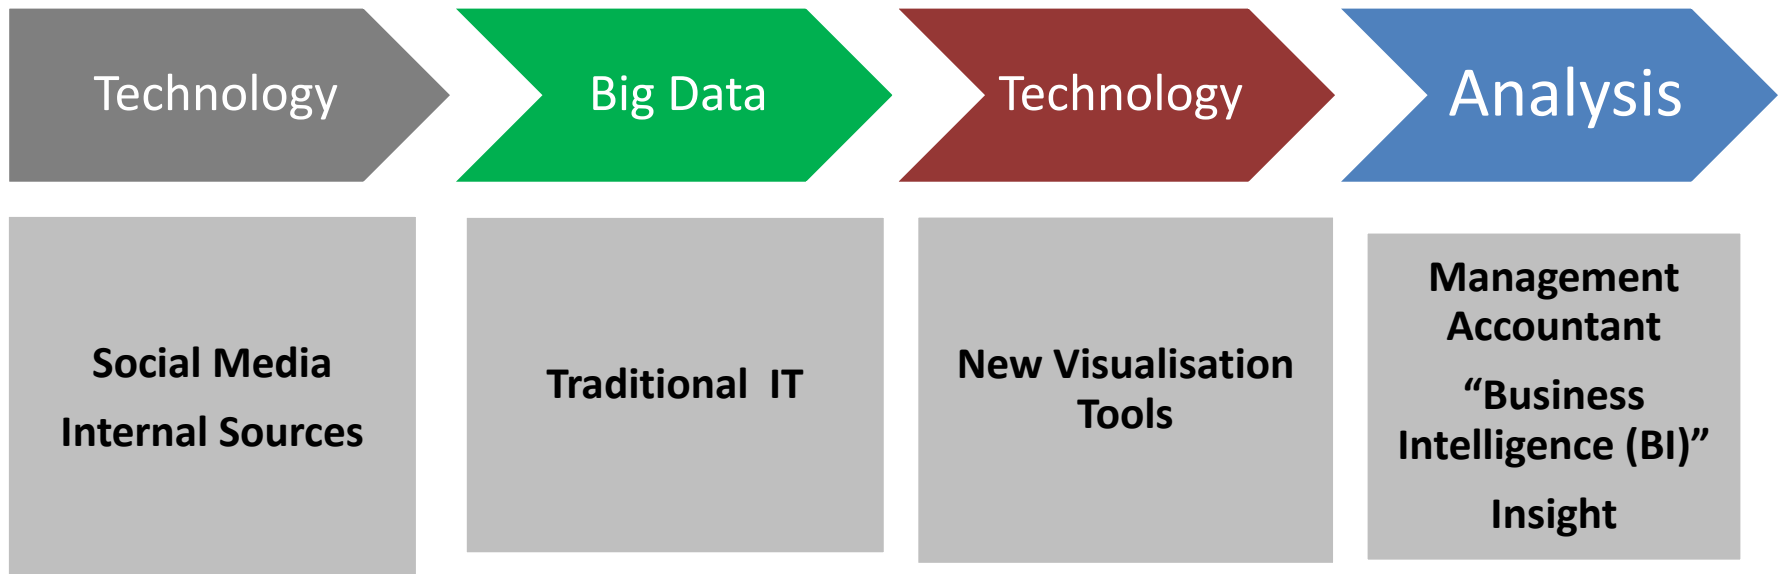

What is a Dashboard?

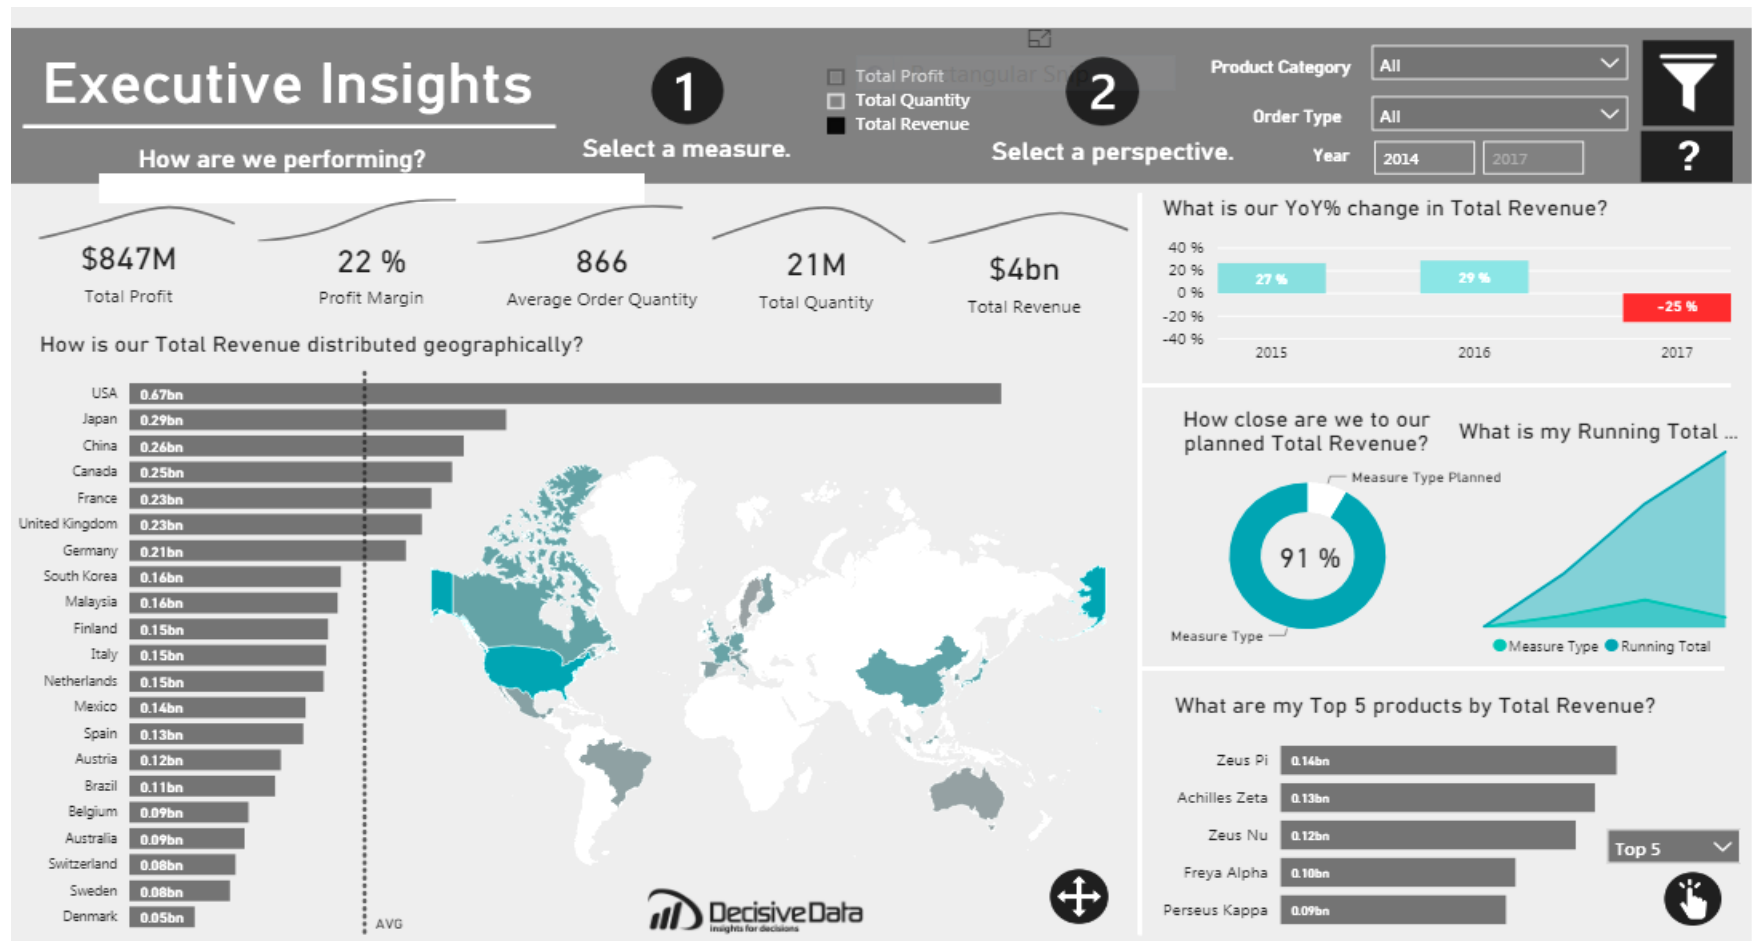

The Changing Role of Finance

Modern technology is disrupting the finance function

Example of a Dashboard

Visualisation

The human brain consumes information much more easily when presented with graphical representations, and so report visualisation concepts have become a key aspect of report design

Visualisation is now a term in the same way as **Big Data**

Visualisation

- The role of **visualisation** is to present the relevant data in such a way that the message is quickly absorbed and understood by the reader.
- Decisions can be made quickly and actioned, rather than time spent reading and processing reports.

Visualisation

- The price of these visualisation solutions has fallen dramatically in the last few years and are cloud based
- The market leaders are:
 - Microsoft Power BI
 - Tableau

How to create a KPI Dashboard

- Define your Key Performance Indicators in consultation with stakeholders
- Create your data visualizations. Design your dashboard manually
- Select your KPI dashboard software
- Gather your key data points
- Schedule a feedback session
- Deploy your KPI dashboard

Defining KPIs

- Understand the **core activities** and **competencies** that define the organisation's success and that underpin it
- Consult widely with stakeholders – think of them as “consumers” of the dashboard
- Define the KPIs
- Define how to measure the KPIs – the metrics

Visualisation

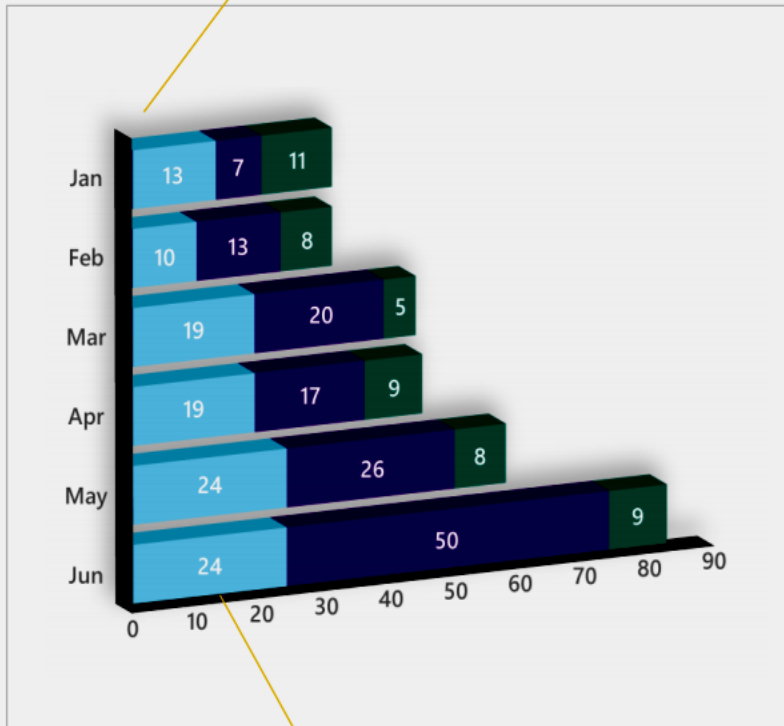

- Simplicity is key – all the relevant information, but no superfluous information
- Layout – Multimedia – desktop, mobile, paper
- Positioning – we read from left to right, so key messages in this optimum area
- Colour consistent, eg red “bad”, green “good”, certain products the same colour.
- Interactive, offer drill down facilities
- Realtime

Visualisation

Drop shadows and 3D formatting draw focus and add no value to the visual.

Text and background contrast is too low.*

Title provides vital context.

Visualisation

Title should provide more context.

Axis needs a label for context.

Visualisation

Opportunity Count by Opportunity Size in January

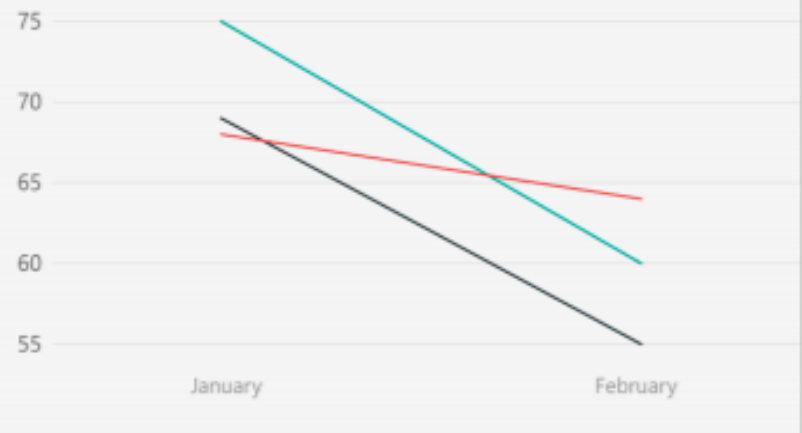

Opportunity Count by Opportunity Size in February

Pie charts work well for proportion comparison, but aren't good for showing changes across time.

Opportunity Count by Region and Opportunity Size

Opportunity Size ● Small ● Medium ● Large

A line chart or combination chart shows trends well.

Choose your software

- Cost
- Data integration - all of the leading solutions offer pre-built data connectors to multiple-source systems. IT may need to be involved initially for data security
- Pre-built starter kits are also included within the solutions. These lead to an accelerated development time and have been built with best practice in mind.

Choose your software

- User-friendly functionality - combined with online help tutorials, this enables getting up to speed as fast as possible
- Mobile reporting - used to involve complex coding. All of the leading providers now enable the option to publish reports to mobile devices, whether tablets or phones. However, care must be taken to ensure the report is relevant to each device

Data Integrity

- Have a data governance plan in place
- Identify the source of the data
- Is this data refreshed often enough to make my dashboard relevant?

Deploying the KPI Dashboard

- Deploy a pilot Dashboard
- Evaluate the information – is it correct?
- Ask Stakeholders for feedback
- Refine the Dashboard
- Automate the Dashboard
- Roll out the Dashboard
- Advocate it

In Summary

A KPI dashboard needs to be

- Relevant – the dashboard is used for decision making
- Concise - all the information, but no unnecessary information
- Realtime
- Interactive
- Well designed in terms of visuals across multimedia
- Automated
