Future of Finance

	Agenda		Time	Presenter(s)
1.	The Warm-up	▶ Why we need think about the Future of Finance	4.30 PM- 4.45 PM	Anthony Muthusi
2.	Vision	► How will the Finance Function look like in future	4.45 PM- 5.00 PM	James Gachihi
3.	CFO Speak	▶ What is your experience so far?	5.00 PM- 5.45 PM	David Ngata Tom Imbo Philemon Kipkemoi
4.	Call to Action	What next from here?	5.45 PM- 5.55 PM	Anthony Muthusi
5.	Q&A	Questions	5.55 PM- 6.00 PM	All

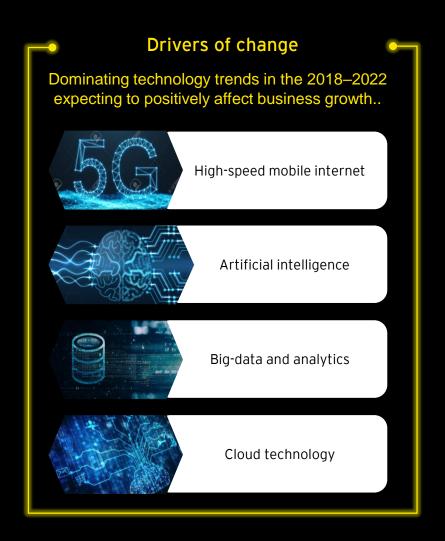

1 Future of Finance The Warm-up

In the 4th industrial revolution the following factors need to be considered as they are all affecting the Finance function

Accelerated technology adoption

85%

of respondents are likely or very likely to expand their adoption of emerging technologies e.g. big data analytics, internet of things and app- and webenabled markets, and to make extensive use of cloud computing.

Changing employment types

50%

of companies expect that automation will lead to some reduction in their full-time workforce by 2022, based on the job profiles of their employee base today.

Value chain composition

59%

expect that they will have significantly modified how they produce and distribute by changing the composition of their value chain and nearly half expect to have modified their geographical base of operations.

A new human-machine frontier

42%

Of tasks are expected to be performed by machines by 2022 compared to 2018, when the average of total task hours performed by machines was 29%

Reskilling imperative

54%

54% of all employees will require significant re- and upskilling. Of these, about 35% are expected to require additional training of up to six months, 9% will require reskilling lasting six to 12 months, while 10% will require additional skills training of more than a year.

Future of Finance The Warm-up

COVID 19 has further complicated the environment and will impact the role of Finance

NOW

financials

What is happening?

Priority is to understand the impact of

consolidation of the latest forecasts

Focus on liquidity and short-term

Lean toward immediate actions

Little or no analysis of options,

decisions with limited analysis

Unsustainable pressure on manual

labor to develop forecast and make

alternatives or trade-offs

Daily or hourly refresh to manage the

COVID-19 on existing forecasted

Forecast 'Model' is simply a

dvnamic environment

operational options

NEXT What if?

Priority is to navigate the 3-18 month term and optimize reactions to the crisis

- Forecast 'Model' sits at center of the decision making process as an options quantification tool
- Better understanding of the macro environment and relationship with the key business drivers
- Initial application of predictive analytics and machine learning
- Still requires daily or weekly refresh
- Focus on broader but still limited set of financial and operational metrics
- Lean toward more tactical options

BEYOND

What opportunities?

- Priority is to proactively capitalize on the opportunities that accompany market upheaval
- Forecast 'Model' is dynamic
- Predictive analytics fully utilized
- Market / competitor landscape fully developed, strategic portfolio opportunities can be analyzed and evaluated
- Refresh is automated, personnel focus on analysis
- Full set of financial and operational metrics analyzed
- Used for both tactical and strategic planning

Engage and protect

Expand and grow

...as shown by a recent EY Survey

Surveys highlight Top CFO issues which have been exacerbated by Covid-19

- 1. 65% of African CFO's expect a **10%** decline in revenues this year
- 2. 85% are implementing cost containment measures or deferring Capex
- 3. 62% will take 3 months or more before returning to Business as Usual
- 4. 64% are changing contractual terms for suppliers
- 5. 60% believe **remote working is here to stay** for some roles

CFO Insights

25% are able to assemble and analyse data on customer sentiment

33% have quality metrics for business processes

20% can access data revealing the impact of their brand

Only 50% of CFOs see the shift to digital as a high priority for their organisation despite increasing demands to move in this direction.

EY's recent survey on CFO

Due to this increase in complexity of the external environment, internal and external stakeholders will raise more questions to the CFO and the finance function

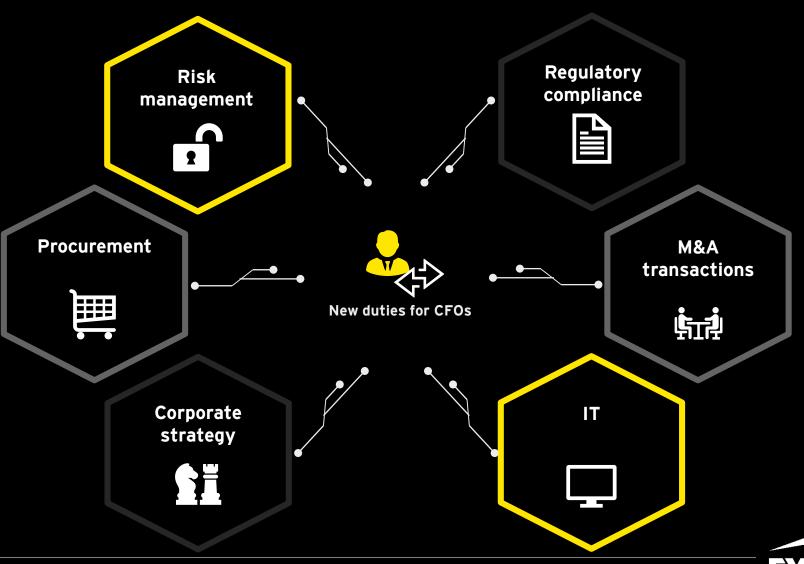

1 Future of Finance The Warm-up

The role of the CFO is continuously changing but the perceptions remain the same

The new CFO mandate

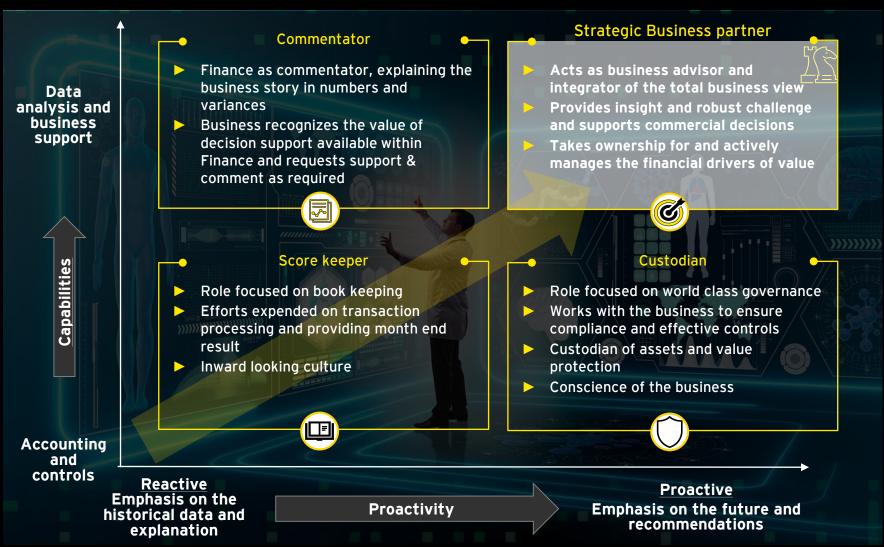

- The number of functional areas reporting to the CFO increased from 4.5 in 2016 to 6.2 today
- The CFO has been actively involved in developing the transformation strategy
- CFOs face increased workloads and expectations, but also face increased opportunities to substantially grow as change leaders and leading the change toward digitization and automation
- CFOs are well positioned to lead the Csuite agenda

Future of Finance The Warm-up

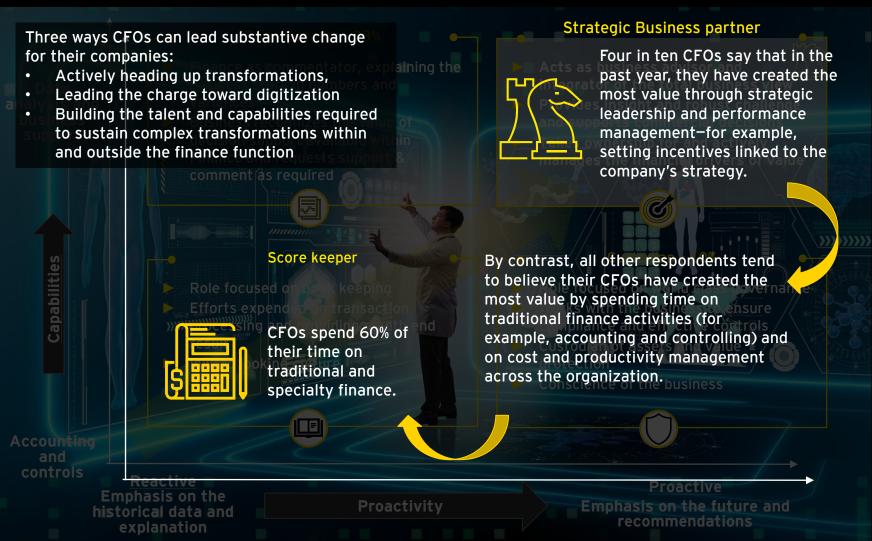

Therefore, the finance function should now leverage from technology and further evolve to truly become a strategic business partner

To become a strategic business partner, Finance needs to fulfill its other roles as Commentator, Score keeper and Custodian

Future of Finance The Warm-up

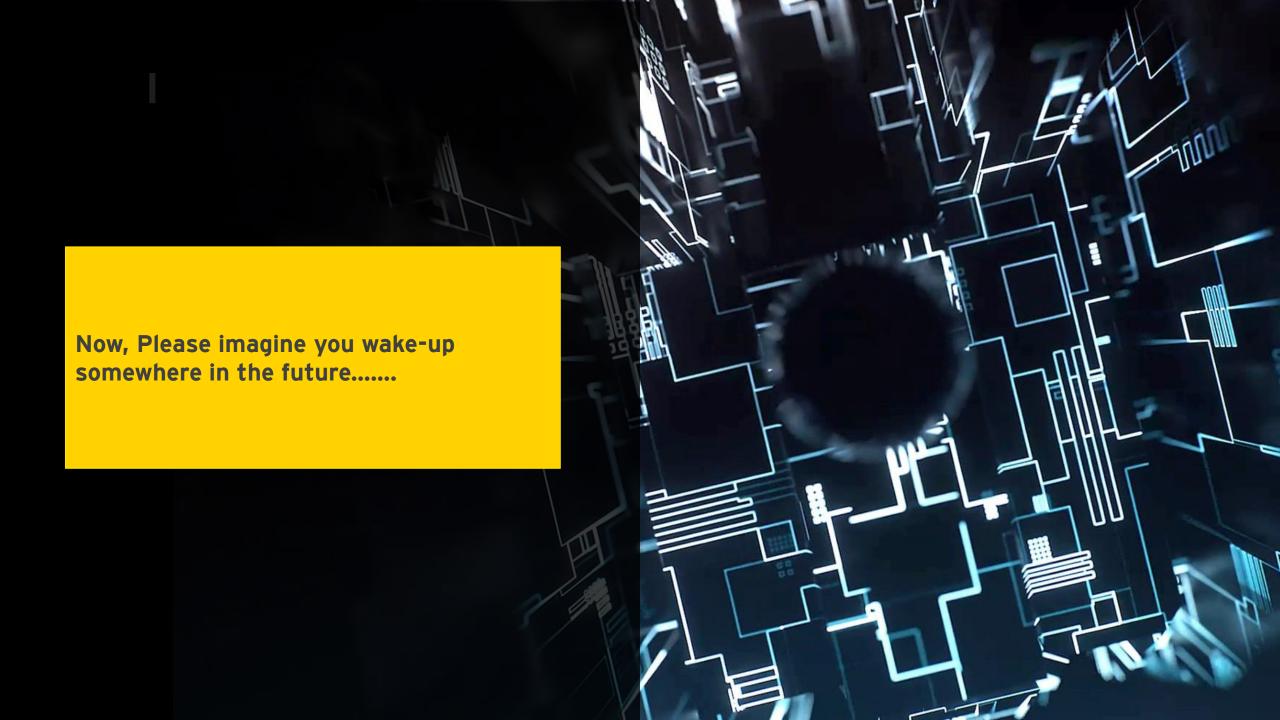

Although this model has been present for many years, proves how this is still relevant.

Interestingly CFOs believe they create value as strategic partners,

however the perception from their peers is not aligned with them.

Future of Finance The vision

The beginning: Disruption What happened to the finance function?

Industry convergence and realignment

Disruptive technologies

Evolving workforce Increased data volumes and complexity

Globalization and geopolitical uncertainty

Increasing risk & compliance requirements

Margin scrutiny increases the cost of doing business

Activist investors demand higher returns

More efficient and cost effective service delivery models

models prepare organization to act quickly

Digital business Ways of working expanded including contingent, remote and robot

New skills and competencies outside of traditional finance are available within finance

More frequent and insightful communication

Use of big data to improve performance

Tensions challenge financial forecasting

Increased regulatory scrutiny, evolving standards on technology use

2 Future of finance The vision

The finance function was reborn and the following are the new resulting rules of the game

1. Financial measures are widely available across the organization to deliver and optimize on its core capabilities: anywhere, anytime, anyone

2. Self-service and instant real-time feedback have become hygiene

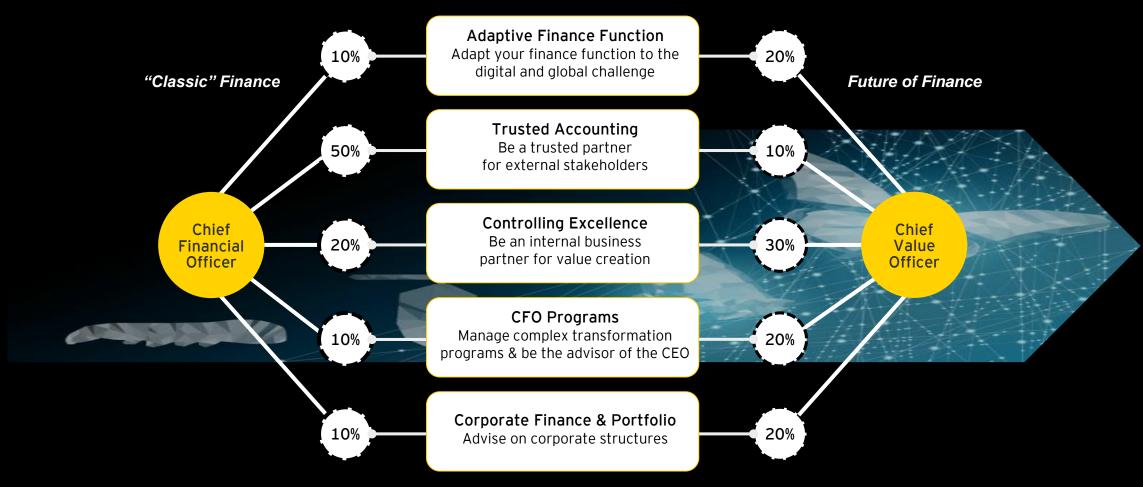

- 3. Mobile devices, wearables provide nearly every piece of information at your fingertips
- **4.** The decision makers in the field are extremely well equipped to understand what is going on; the value drivers, the options available and the risks connected
- **5.** The finance middleman is replaced by superb ecosystems of data and partners connected by smart technology

6. Organizations are fully connected and the peer-to-peer activities are automatically accounted for in the **cloud** while the integrity is guaranteed through **blockchain** technology

The current CFO role will be enriched with more complex tasks, while more current responsibilities will be automated

These changes directly impacted the leader of the finance function and the CFO space in all Finance areas

"Classic" Finance

Future of Finance

Accounting and Reporting

Treasury

Systems & Applications

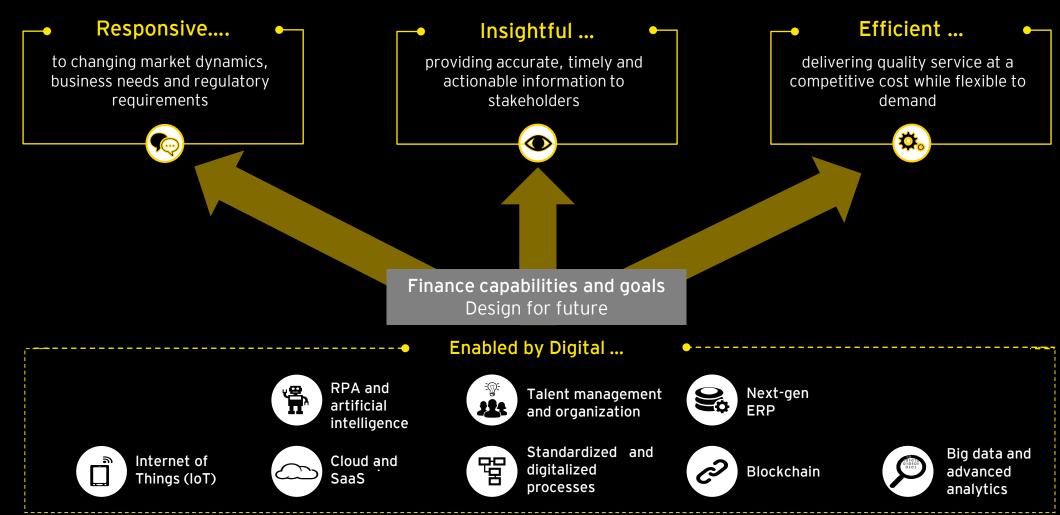

Catalyst to enable business model & M&A	Prescriptive insight to drive profitable growth	Value based, data driven capital allocation & monitoring
Integrated, driver based planning	Machine learning enabled forecasting	Realtime, self serving reporting, what if analysis
Focus on business risks & remediation	Preventive controls, embedded with processes	Automated controls, real time monitoring incl. IOT sensors
RPA enabled automated & intelligent processes	Blockchain distributed ledger for intercompany	End to end processes enabled by next gen ERP
Realtime visibility of cash	Near real time integration with banks and partners globally	Blockchain based clearing and settlements
Cloud and In-memory	Ħ Al	Data Lake with structured and unstructured data

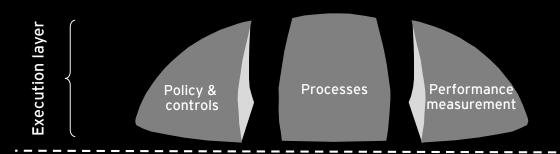

The Finance function learned from its mistakes and evolved as it required to become AGILE to survive and thrive in the new normal

Future of finance The Vision

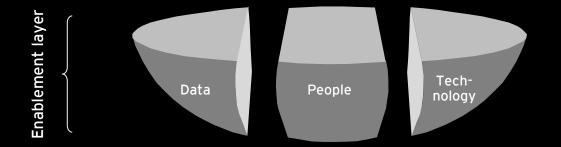

Rethink the finance target operating model

- Establish a robust policy framework to support global governance and risk management
- > Establish a global performance measurement framework
- > Deliver continuous improvements of service levels

- > Structure the organization to deliver value to the business
- Define appropriate local, regional, and enterprise structures including shared services and outsourcing
- > Optimize physical/virtual location rooms
- ➤ Consider cross-functional deployment structures
- > Rationalize facilities and real state footprints`

- > Define a set of consistent global data standards and data structures
- > Implement single sources of data
- Define a clear system architecture and deploy integrated tools to enable value-added activities

As CFOs, you will need to develop your game plan to get to this future

Define your ambition and operating Shaping your FoF Discover Detailing your starting point **Visioning** model implications roadmap Step 2 Step 0 Step 1 Step 3 Step 4 Step 5 Step 6 "Exploring the "Defining the "Distill operating "Alian future "Be inspired "Understand the "Define the how the Future envisioned Future operating model current state of expectations of FoF vision and model of Finance could operating your finance vour implications for of Finance with and way of look like in function" customers" model" each functional workina" vour kev 20XX" area" stakeholders" • Frame the future Define key data Interview and Review the journey Translate future Collaborate with Playback and of finance vision points to be so far and the vision into key stakeholders consolidation with engage key benchmarked stakeholders to strategy operating model to challenge the senior leaders Execute benchmark review and provide ingredients implications current thinking to agree the Future ■ Define a to-be Develop change model, ensure the analysis input on the Evaluate current state and Future of Finance Execute external narrative per implementation level of ambition vision and strategy agree on the case function/process options around the has been achieved analysis on how the market for change "Open our Mind" Prioritize phased approach and buy in to the changes and trends If necessary, presentations with underpinning to inform the disruptive case for might affect your conduct workshops outside-in view technology implementation change Outline the future specific finance to further deep required to bring plan, cost benefit function dive in each operating model the operating analysis and case for the envisaged model to life specific pain area for change Ultimate output: future of finance Define how the Future of Finance outcome can help actionable game-plan shaping the overall journey

What are some of the initiatives your company is undertaking related to the future of Finance?

- Has you company budgeted for these initiatives? If yes, what is the budget?
 - Less that Kshs 10 M
 - Between Kshs 10M- Kshs 100M
 - Above Kshs 100M

Do you think you have the right skills in the finance function to drive it to the future?

► Which skills do you lack?

Is investment in technology within Finance a key priority in your current strategy?

If yes, what Technology do you plan in investing in- in the next 3 years?

Which processes in your finance function are most optimised for the Future ?

What processes do you plan to optimise in the next 3 years?

- The synthesis of technology and people will be critical for the future finance function.
- Tomorrow's finance function will only succeed if it has people who can lead the technology debate and who are willing to innovate in finance's riskaverse culture.
- The function's team members will only be able to focus on higher-value tasks, such as analytics and forecasting, if the technology is in place both to take care of transactional processes and to provide the data needed for the generation of strategic insight

"To build tomorrow's digitally enabled and talent-rich finance function, we suggest three priorities for CFOs:

- A clear vision for the future finance function, aligned with the organization's overall purpose
- Build systems and tools that enable teams to share information and make connected data driven decisions
- Find the new skills and capabilities required to exploit new technologies and increasing volumes of data.

In this transformative age, the role of the finance function is evolving and new thinking is required!
