

THE ANNUAL INTERNAL AUDIT, RISK & FORENSIC CONFERENCE

Venue: Sarova Whitesands, Mombasa

Date: 10th December 2020

Presenter: CPA Phares Chege
Deputy Commissioner, Internal Audit, KRA

About CPA Phares Chege

Profession

- ❖ Audit & Risk management practitioner for over 16 years
- ❖ Experience in public Sector – 70% of working life
- ❖ Experience in private Sector – 30% of working life

Some of the Organizations worked with:

- ❖ Kenya Revenue Authority
- ❖ Siginon Group Limited
- ❖ Higher Education Loans Board
- ❖ KPMG East Africa
- ❖ KeNHA
- ❖ Office of the auditor General

Qualifications

- ❖ MBA (Accounting)
- ❖ BA (Economics)
- ❖ Certified Public Accountant of Kenya
- ❖ Certified Internal Audit Quality Assessor
- ❖ Certified Information Systems Auditor (CISA)
- ❖ Certified in Risk and Information Systems Control (CRISC)
- ❖ Certified Operational Risk Practitioner (CORP)

Training experience

Since 2004 with focus on:

- ❖ Internal Auditing & QAIP
- ❖ Enterprise Risk Management
- ❖ Forensic Audits
- ❖ Data Analytics
- ❖ Strategic Management
- ❖ Financial Reporting

WORKPLAN

4

PREPARED BY:			AUDIT PROGRAM			Author: Lance M. Tancato		
APPROVED BY:			Logical Security Operating Systems - Generic			Audit Date:		
Project	Sub-Project	Audit Step			Date	Initials		
SYSTEMS UNDERSTANDING								
A	1.0	Organization Situation: To ensure that the audit team has a clear understanding of the definition of responsibilities for system administration and maintenance. Obtain a current organization chart if available.						
A	1.1	Determine who is responsible for system administration and maintenance. Obtain a current organization chart if available.						
Hardware Platforms Situation: To ensure that the audit team has a clear understanding of the hardware platform subject to review and to obtain the necessary information for identifying critical systems throughout the operating environment. Obtain an understanding of the server infrastructure at the site under review. Request a complete server inventory. If an inventory is not available, obtain an understanding of the server environment through direct observation of the systems administrator(s). If a server inventory is unavailable, meet with system administrators and personnel near the facility to identify all servers and operating systems. At a minimum, obtain the following information regarding each server: • The scope of the review: <ul style="list-style-type: none">Server nameManufacturer and modelPurpose / function of serverOperating systemEnterprise supportResponsibility								
A	2.1	Obtain an understanding of the server infrastructure at the site under review. Request a complete server inventory. If no inventory is available, obtain an understanding of the server environment through direct observation of the systems administrator(s). If a server inventory is unavailable, meet with system administrators and personnel near the facility to identify all servers and operating systems. At a minimum, obtain the following information regarding each server:						
A	2.2	Obtain an understanding of the server infrastructure at the site under review. Request a complete server inventory. If no inventory is available, obtain an understanding of the server environment through direct observation of the systems administrator(s). If a server inventory is unavailable, meet with system administrators and personnel near the facility to identify all servers and operating systems. At a minimum, obtain the following information regarding each server:						
A	2.3	Determine if the server infrastructure is properly configured for the scope of the review.						
Operating System Situation: To ensure that the audit team has a clear understanding of the operating system installed on the servers and to obtain the necessary information for identifying critical systems throughout the operating environment. Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system: • The scope of the review: <ul style="list-style-type: none">Operating system nameManufacturer and modelPurpose / function of operating systemEnterprise supportResponsibility								
A	3.1	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.2	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.3	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.4	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.5	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.6	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.7	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.8	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.9	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						
A	3.10	Obtain an understanding of the operating system installed on the servers. Request a complete operating system inventory. If no inventory is available, obtain an understanding of the operating system through direct observation of the systems administrator(s). If an operating system inventory is unavailable, meet with system administrators and personnel near the facility to identify all operating systems and operating systems. At a minimum, obtain the following information regarding each operating system:						

AUDIT PROGRAM

6

1. Internal Audit Governance Documents – Policies

Policies

1. Internal Audit Charter
2. Audit Committee charter
[sometimes combined with Risk]
3. Risk Management policy

1. Internal Audit Governance Documents –Strategic Plan

Standard 2000 – Managing the Internal Audit Activity

The internal audit activity adds value to the organization and its stakeholders when it considers **strategies, objectives, and risks**; strives to offer ways to enhance governance, risk management and control processes; and objectively provides **relevant assurance**.

1. Internal Audit Governance Documents –SOPs

Standard Operating Procedures

Standard Operating Procedures software enables organizations to meet their objectives fast and save money by showing quality management control, training of employees, compliance assurance, and change control.

Standard Operating Procedures Preparation

Standard Operating Procedures Review and Approval

Frequency of Revision and Update

SOP Control

SOP Document Tracking and Control

SOP Document Tracking and Control

3

Standard 2040 – Policies and Procedures

CAE must establish policies and **procedures** to guide the internal audit activity.

Procedures are step by step guides on internal audit processes.

			<ul style="list-style-type: none">Request a complete server inventory. If an understanding of the server environment (i.e., system administrator(s)).If a server inventory is unavailable, meet with personnel and tour the facility to identify and document each server.At a minimum, obtain the following information regarding each server:<ul style="list-style-type: none">Server nameManufacturerPurpose / functionOwnerEnterpriseReviewIdentify the applications.					
	A	2.2	Obtain an understanding of the environment (i.e., printers, shared disk drives, etc.).					
	A	2.3	Determine which servers in the environment.					
	A	3.0	Operating System					
			Objective: To ensure that the audit team has a clear understanding of the operating system and the review. Furthermore, to ensure that known vulnerabilities and specific operating system versions are considered during the audit.					
	A		Determine if the operating system is running on the servers.					
			<ul style="list-style-type: none">Determine if the most current version of the operating system is installed. If not, obtain justification for why the most current version is not installed.Determine if all known operating system fixes have been installed. If not, obtain justification for why available fixes have not been installed.Determine if procedures are in place to ensure that system administration personnel are informed of available operating system fixes in a timely manner.Determine if third-party security software is running on the servers.					
	A		Network Overview					
			Objective: To ensure that the audit team has a clear understanding of network components and interfaces which may impact the logical security of specific servers and workstations.					

AUDIT PROGRAM

5

AUDIT PROGRAM

5

2240 – Engagement Work Program

Internal auditors must **develop** and **document work programs** that achieve the engagement objectives.

Audit programs capture processes in scope, risk, controls [existing & desired] and audit tests

Details to be covered in **Section 2.**

1. Internal Audit Governance Documents –Internal Audit Manual

Standard 2040 – Policies & Procedures

Internal audit policy and procedure documents often are **assembled into an internal audit manual** for the internal audit activity to use. The documents may include methods and tools for training internal auditors.

CAE may require internal auditors to **acknowledgement by signature** that they have read and understood the manual.

2. Developing audit programs

PREPARED BY:			AUDIT PROGRAM			Author: Lance M. Turcato		
APPROVED BY:			Logical Security Operating Systems - Generic			Audit Date:		
Assigned	Date	Initials	Audit Step			Date	Ref.	Initials

	A	2.2	Obtain an understanding of the peripheral devices in the environment (i.e., printers, shared disk drives, etc.).					
	A	2.3	Determine the number of servers in the environment.					
	A	3.0	Operating System					
			Objective: To ensure that the audit team has a clear understanding of the operating system(s) running on the servers. Furthermore, to ensure that known vulnerabilities with specific operating system versions are considered during the review. All exposures are identified.					
	A		Determine if the operating system(s) running on the servers is the most current version of the operating system is installed. If not, obtain justification for why the most current version is not installed.					
			Determine if all known operating system fixes have been installed. If not, obtain justification for why available fixes have not been installed.					
			Determine if procedures are in place to ensure that system administration personnel are informed of available operating system fixes in a timely manner.					
			Determine if third-party security software is running on the servers.					
	A		Network Overview					
			Objective: To ensure that the audit team has a clear understanding of network components and interfaces which may impact the logical security of specific servers and workstations.					

AUDIT PROGRAM

5

AUDIT PROGRAM

“Audit’s role in enterprises continues to change in reaction to events, risks, or regulation affecting the company. More time needs to be invested to shift internal audit from reactionary to align with the enterprise’s strategic needs.”

PwC 2014 State of the Internal Audit Profession Study, March 2014

2. Developing audit programs - Annual planning - AAWP

IPPF Standard 2010: Planning

The CAE **must** establish a **risk-based plan** to determine the priorities of the internal audit activity, consistent with the organizations goals.

The related Practice Advisory 2010-1: Planning

The internal audit activity's plan of engagements **must** be based on a documented on a documented **risk assessment**, undertaken at **LEAST** annually. The input of senior management and the board must be considered in this process.

Standard 2020: Communication & Approval

CAE **must** communicate the internal audit activity's plans and resource requirements, including significant interim changes, to senior management and the board for review and approval. The chief audit executive must also communicate the impact of resource limitations.

2. Developing audit programs

- Engagement planning

IPPF Standard 2200: Engagement Planning

Internal auditors must develop and document **a plan for each engagement**, including the engagement's objectives, scope, timing, and resource allocations.

Standard 2210: Engagement Objectives

Objectives must be established for each engagement.

2210.A1 – Internal auditors must conduct a **preliminary assessment of the risks** relevant to the activity under review. Engagement objectives must reflect the results of this assessment.

2210.A2 – Internal auditors must consider the probability of significant errors, fraud, noncompliance, and other exposures when developing the engagement objectives.

2210.A3 – **Adequate criteria** are needed to evaluate governance, risk management, and controls. Internal auditors must ascertain the extent to which management and/or the board has established adequate criteria to determine whether objectives and goals have been accomplished

2. Developing audit programs - Engagement planning...

In addition to the main planning documents, the following are prepared:

1. Audit notification – before planning
2. Kick off meeting notes/ agenda
3. Tasks Allocation
4. List of requirements

1, 2 and 4 are circulated to auditee early enough as per your service charter

2. Developing audit programs - Audit Programs

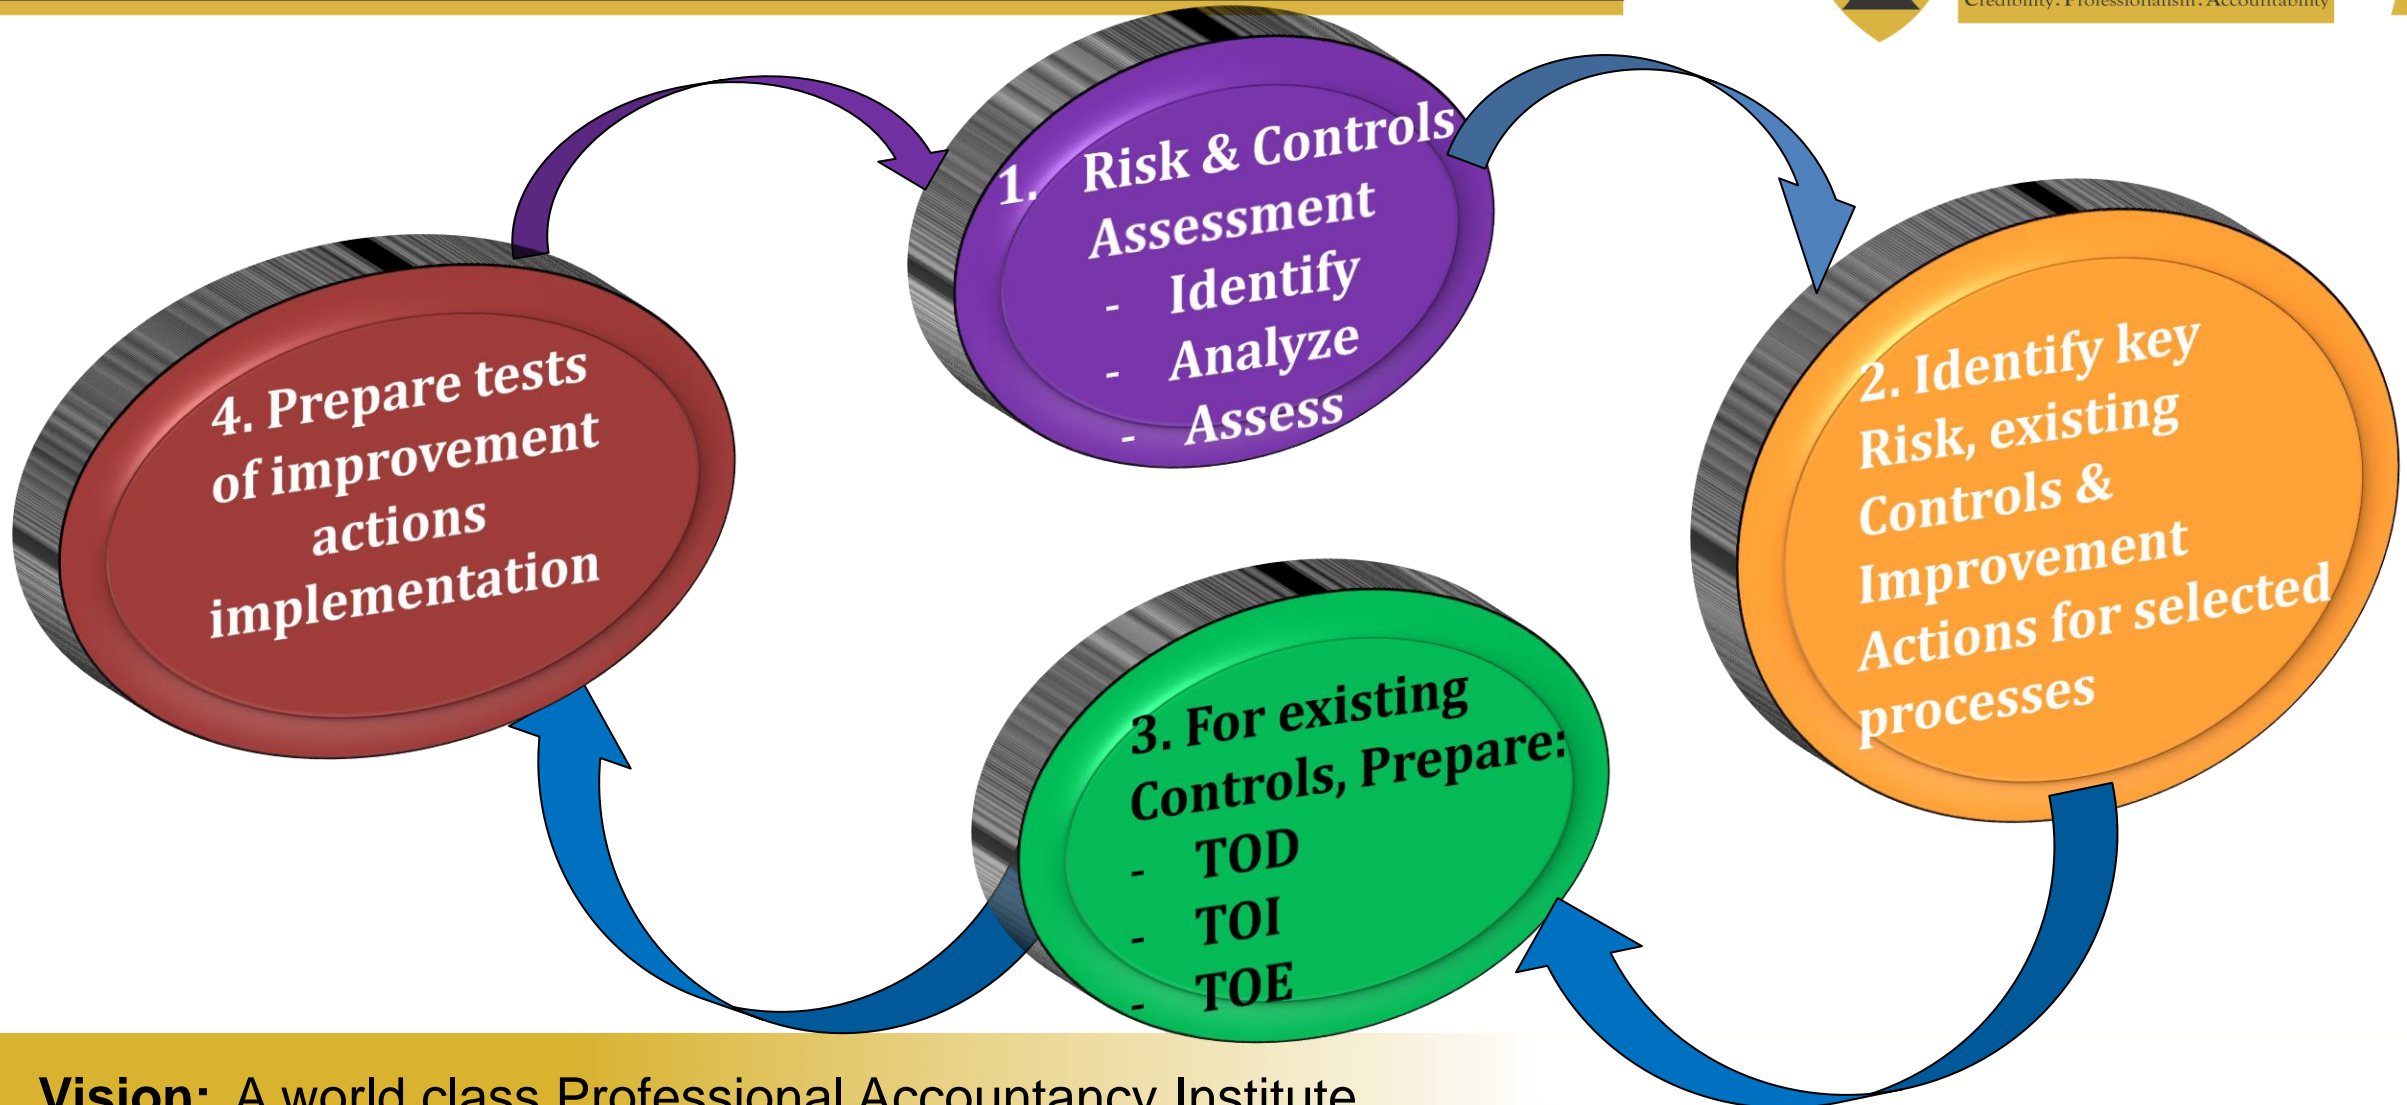

2240 – Engagement Work Program

Internal auditors must **develop** and **document work programs** that achieve the engagement objectives.

2240.A1 – Work programs must include the **procedures** for identifying, analyzing, evaluating, and documenting information during the engagement. The work program **must be approved** prior to its implementation, and **any adjustments approved** promptly.

2240.C1 – Work programs for consulting engagements may vary in form and content depending upon the nature of the engagement.

2. Developing audit programs - Steps

2. Developing audit programs

- Audit Programs - RCSA

Process: Procurement

Process objective: To procure goods and services at most cost effective price, required quality and within expected timelines

#	Critical success factors	Cause	Risk event	Effect	Inherent risk rating
1	Procurement system [accurate, available, secure, modern, scalable]	Weak system configurations, overrides	Deleted/ modified LPOs	Suppliers overpayments, lost money	High
2	Goods & services [suitable, quantity, quality, timely delivery]	No specifications, management override	Good procured yet not required	Loss of money	High
3	Procurement staff (adequate, integrity,	Collusion, Weak inspection, low cost objective	Substandard supplies	Unmet objectives, lost money, repeat procurements	High

2. Developing audit programs

- Audit Programs – RCSA...

#	Cause	Risk event	Effect	IR Rating	Control in place	Residual risk rating
1	Weak system configurations, overrides	Deleted/modified LPOs	Suppliers overpayments, lost money	High	Maker checker control, sequential numbers generation (Requisitions, LPOs)	Low
2	No specifications, management override	Good procured yet not required	Loss of money	High	Requisition in system, LPOs, Inspection & acceptance,	Medium
3	Collusion, Weak inspection, low cost objective	Substandard supplies	Unmet objectives, lost money, repeat procurements	High	Inspection acceptance and	High

2. Developing audit programs

- Audit Programs – RCSA...

#	Risk event	Control in place	RRR	Audit tests/ program
1	Deleted/ modified LPOs	Maker checker control, sequential numbers generation (Requisitions, LPOs)	Low	Will not be tested. Risk within appetite level. To monitor in ERM
2	Good procured yet not required	Requisition in system, LPOs, Inspection & acceptance,	Medium	Will not be tested. Risk within appetite level. To monitor in ERM
3	Substandard supplies	Inspection and acceptance	High	<u>Test Inspections for each supply</u> TOD – What does Policy or procedure say about this control? TOI – Sample 1 transaction and confirm if implemented TOE – Analyze data to check consistency or sample and confirm was done in line with procedure.

2. Developing audit programs - Testing approach

Controls Testing

1

Test of Design (TOD)

- Does the control exist in the organization? Is it documented in a policy or procedure?

2

Test of Implementation (TOI)

- How is it performed and documented?

3

Test of Operating Effectiveness (TOE)

- Has the implemented control/procedure been adequately & consistently applied throughout the period under review?

4

Improvement Actions

- Have the known improvements actions been implemented on due dates?
- What are the additional improvement actions to mitigate the risk further?

2. Developing audit programs

- Testing approach – I&A process

Controls Testing

- 1 - **Test of Design (TOD)**
 - Establish if there is a policy or procedure on how procurements inspection and acceptance. If not documented, enquire from process owner
- 2 - **Test of Implementation (TOI)**
 - Select one tender and confirm that the documented procedure was followed
- 3 - **Test of Operating Effectiveness (TOE)**
 - Select a sample of procurements and
 - Establish that a committee was established and approved by CEO
 - Inspection documented & signed off by all members.
- 4 - **Improvement Actions**
 - Establish if there is rotation of staff who are nominated to perform inspections [no staff does more than 3 inspections in a year].

2. Developing audit programs

- Testing approach – I&A process

CAUTION:

Avoid asking for standard audit programs from your peers **blindly**, instead develop your own risk based assurance programs aligned to your organization enabling legislation, corporate goals, policies and procedures.

Where your organization policies & procedures are deficient/ defective, you can engage management and Board to embrace **leading practices** like ISO Standards, known frameworks e.g. King III, COSO, etc to enhance controls. Once, adopted, these practices need to be included in policies and procedures.

*Thank
you*
